City of Shreveport
"Short Form" Standard Erosion Control Plan

This form can be utilized to satisfy the City's "erosion control plan" requirements, as specified in Section 34-125 of the City's Code of Ordinances, in the following circumstances: (1) sites outside of commercial or residential subdivisions where less than one acre of land will be disturbed, or (2) individual lots within very small (less than one acre) commercial or residential subdivisions.[1]

Please call the City's Storm Water Office at 673-6583 (or, if the site is in the Cross Lake Watershed, the Cross Lake Environmental Control Office at 673-7647) if you have any questions.

[1]Note that the City's approval of this form and/or its granting of a land altering activity permit or building permit do not ensure that the plan meets all applicable state and federal requirements for erosion control.

Instructions:

1. Fill in the information blanks below.
2. Complete the site diagram below or show on an 8 1/2 X 11 plot plan: the site boundary, location of the proposed building and paving, the approximate gradient and direction of slopes after grading operations, and location of erosion and/or sediment controls to prevent soil from leaving the site.

Project Location, Lot Number, Street_____

_____

Builder (Name and contact information)_____

_____

_____

Owner Name and Phone Number_____

Site Diagram

3. List method(s) for temporary and final stabilization. (Examples are: Seed, mulch, or sod.) Note that temporary stabilization is required in areas that will sit idle for 14 days or more and upon completion of the project.

4. List measures to minimize off-site tracking of dirt and mud by vehicles. (Examples: restricted access during wet or muddy conditions; a construction entrance, etc) **Please note: if mud or dirt is tracked onto a road, immediate cleanup is required.**

5. List waste management practices, including concrete. (Example: "Building material waste will be properly disposed of so that pollutants and debris are not carried off-site by wind or water. A pre-determined concrete truck wash site will be utilized, with the site fully contained and in no way connected to ditches or other drainage structures.")

- All installed erosion control practices must be maintained until the disturbed areas they protect are stabilized.
- If controls are found to insufficient other controls will be required.
- Submit this plan at the time of building permit application.
