March 19, 2013 - Repair of 20” Water Main at Hearne and Milam to Begin Tonight

20 inch water main blowout

The Department of Water and Sewerage will begin repairing a twenty-inch water main blowout at 10 p.m. tonight and work will continue until the project is finished. This work will affect traffic in both inside lanes and half of the intersection at Hearne Avenue and Milam Street. Repairs will begin on the street once work is completed on the water main.

Residents and business directly affected by the water main repair may notice a decrease in their water pressure.
