FOR IMMEDIATE RELEASE

February 21, 2021

Progress being made to restore water

The Water Department is making progress with getting water restored to more customers.

There are still 10,000 customers with below minimum water service. During parts of the winter storm, most of the system's 70,000 customers were without water.

Crews continue to work around the clock to restore water. The system is expected to be fully restored by Tuesday, but most customers should see a partial level of service prior to then. Please remember there is still a boil advisory until further notice.

The Louisiana Rural Water Association is assisting the City's Water Department with crews in marked vehicles looking for burst pipes.

Citizens who spot leaks along water mains or need water turned off to do repairs, are asked to call 318-673-7600.
