BOIL WATER ADVISORY HAS BEEN LIFTED

At 08:40 AM today, the Louisiana Department of Health lifted the boil advisory issued on January 28, 2024, for customers in the following areas:

West Pressure Zone of the Shreveport water System

The samples collected and analyzed from this area were shown to be absent of any coliform bacteriological contamination. After receiving the analytical results, an official of the Louisiana Department of Health approved the rescission of the voluntary boil water advisory. Those customers may now resume the normal use of their water supplied by the City of Shreveport.
